Spencer · Investment Scanner — Example · Wednesday 22 April 2026

> **Example output.** This is a real report Spencer delivered to Nick on the date above. Shown here as a sample of what the system produces. Your Spencer would produce reports scoped to your world, your markets, your positions.

TL;DR

⚠️ **Cautiously Bullish** (hard assets structural bid; Hormuz/Warsh binaries live today) · **Top trigger: RTX** entered $195, now $187.17 (−4%), stop $168, NATO-spend thesis intact — hold · **Top universe candidate: SLV** at $68.49, essentially at $68 entry, accumulate zone active, conv 73% — watchlist trigger imminent.

Detail

Easton Assets — Investment Scanner

Wednesday 22 April 2026 · Prepared by Spencer Easton, AI Chief of Staff

🎯 TL;DR — Today's Stance & Highest-Conviction Actions

TODAY'S MARKET STANCE

⚠️ Cautiously Bullish — Hard Assets Bid Structurally, Geopolitical Binary Risk TODAY

- 🔥 **SLV at $68.49 — essentially AT entry $68.** Watchlist trigger imminent. Silver thesis intact; accumulate zone active. Conv 73%.
- ⚡ **RTX NEWLY TRIGGERED at $195 — now $187.17, -4.0% paper.** Stop $168 intact, NATO spending thesis unchanged. Hold and monitor.
- 🎯 **Iran ceasefire expires TODAY (April 22)** — Hormuz risk not fully priced. Oil at $90.59. Energy sector only green sector today (+1.45% XLE). Binary catalyst: watch for oil spike or relief rally.
- ⚠️ **ASML at $1,458.97 — paper -3.89%.** Stop $1,280 intact. China export controls + tariff noise are the culprits. Thesis unchanged; do not stop out.
- 🟢 **BTC all 3 valuation models aligned bullish** (Bottom 24.3% · Cowen 0.358 Low · Regime 0.15 Risk-On). Negative funding at year-highs = short squeeze setup per newsletter. Warsh Fed testimony today is the macro binary: dovish = BTC/gold breakout.

📊 Tracker Performance Summary

PAPER PORTFOLIO — 22 APRIL 2026

> Active plays: **5** · Avg paper return: **+1.59%** · Best: **NVDA +8.04%** · Worst: **RTX −4.02%** · Win rate (active): **3W / 2L** · Closed trades: 0

🔄 This Run's Changes

- ➕ **Added to Watchlist:** none this run
- ⚡ **Newly triggered: RTX** — triggered at entry $195.00 (price pulled back from higher levels); current $187.17, paper -4.02%. Defence thesis intact; NATO 2% GDP mandate + Raytheon missile demand.
- ❌ **Dropped from Watchlist/Triggered:** none
- ✅ **Retired tickers this window:** none

🧭 Market Call

Wednesday April 22 is a binary event day: the Iran ceasefire officially expires with Trump signalling no extension, oil sitting at $90.59, and Kuwait already declaring force majeure — the Hormuz risk is the single biggest tail risk on the board and it is live right now. Against that backdrop, markets are showing a logical split: energy is the only green sector (+1.45% XLE), hard assets are pulling back intraday (GLD −2.83%, SLV −5.07%) despite the structural debasement bid from Howell/Alden/Pal, and crypto is quietly outperforming with BTC +2.73% on $664M ETF inflows and negative funding rates pointing to a short squeeze setup — confirmed by Strategy's $2.54B BTC purchase announced overnight. The second binary catalyst is Kevin Warsh's Fed testimony today: a dovish lean breaks BTC and gold to new highs; a hawkish lean risks a stagnation narrative that hits everything simultaneously. The semi sector remains mixed with ASML and TSM lagging — Pal and Aschenbrenner's AI-infrastructure thesis is still intact but needs a catalyst to re-accelerate. **Net:** stay long hard assets and quality AI infrastructure, hold existing triggered plays within stop levels, and let the Hormuz/Warsh binary clear before adding meaningful new size.

🌍 Market Snapshot — 1D / 7D / 30D

Asset	Class	Price	1D	7D	30D	Signal
BTC	Crypto	$75,873	**+2.73%**	**+1.43%**	**+13.77%**	▲ Bullish — ETF inflows, funding = squeeze setup
ETH	Crypto	$2,315	**+2.22%**	**−1.87%**	**+14.42%**	⚠️ Neutral — Regime 0.2 L2 pressure; hold, don't

🔍 Markets Scanned — Coverage This Run

84 assets reviewed across 15 sectors. (TICKERS UNRESOLVED: TAO-USD, SQ — omitted.)

⚠️ CRYPTO — 10 assets

Assets: BTC, ETH, SOL, AVAX, MSTR, COIN, GLXY, BMNR, ZEC, HYPE32196.

Analysts: Howell, Alden, Cowen, Hayes, Pal, Nadeau.

BTC is the standout today at **+2.73%** ($75,873) — holding strength on $664M ETF inflows and BTC-negative funding rates at year-highs (contrarian short-squeeze signal). However, crypto equities are diverging hard: COIN **−7.41%**, GLXY **−6.90%**, MSTR **−4.00%** are all selling off, suggesting equity-market risk-off is bleeding into listed crypto infrastructure names despite pure BTC strength. Cowen's risk model at 0.358 (low risk) and Regime at 0.15 (risk-on) confirm the underlying bid is real. Strategy's $2.54B BTC purchase overnight reinforces institutional conviction. The Kelp $13B DeFi exploit flagged in newsletters is a watch item for ETH L2 confidence but not systemic.

Weekly sentiment: ⚠️ Mixed — pure crypto bullish (BTC/ETH up), crypto equities bearish; divergence is notable.

⚠️ SEMICONDUCTORS / AI — 11 assets

Assets: NVDA, TSM, ASML, MU, AMD, QCOM, INTC, AMAT, AVGO, SMCI, MSFT.

Analysts: Pal, Howell, Aschenbrenner.

Sector is bifurcating: AMD **+3.47%** and MSFT **+1.46%** are leading while NVDA **−1.08%**, ASML **−1.19%**, and TSM **+0.50%** stall — the mega-cap AI names are where market hesitation shows. On a 30D basis the thesis is firmly intact: AMD **+41.31%**, INTC **+51.04%**, AVGO **+29.79%** all confirming the AI capex supercycle per Aschenbrenner. ASML's underperformance (China export controls + tariff noise) is the key watch item — it is a leading indicator for the global semiconductor cycle, and if it weakens further below $1,350 it challenges the broader bull case.

Weekly sentiment: ⚠️ Mixed — 30D momentum strongly bullish but daily action shows large-cap AI semis stalling at elevated valuations.

⚠️ AI INFRASTRUCTURE / POWER — 11 assets

Assets: VRT, ETN, CEG, VST, ANET, APH, DELL, ORCL, TT, JCI, GLW.

Analysts: Aschenbrenner, Pal.

A clear internal split: hyperscaler-adjacent names (DELL **+3.98%**, ANET **+3.60%**, ORCL **+2.02%**) are ripping on AI capex momentum while nuclear-linked power utilities (CEG **−3.43%**, VST **−2.94%**) are being hit by the broader nuclear sector selloff. VRT **−0.63%** holds relatively well — still above entry $285 watchlist level, watching for a $285 pullback. The 30D picture is uniformly bullish across the sector (ANET **+31.73%**, DELL **+34.69%**, VRT **+22.10%**) confirming Aschenbrenner's AI power infrastructure thesis.

Weekly sentiment: ⚠️ Mixed — compute/networking names strongly bullish; power/utility names pressured by nuclear sector risk-off today.

🔴 NUCLEAR / URANIUM — 5 assets

Assets: URNM, CCJ, UEC, OKLO, SMR.

Analysts: Alden, Aschenbrenner.

Today is a significant sector-wide drawdown: OKLO **−8.10%**, SMR **−8.76%**, CCJ **−5.67%**, URNM **−4.72%**, UEC **−4.49%**. However, the 30D picture remains intact — URNM **+15.41%**, CCJ **+14.83%** — suggesting today is a technical pullback, not a thesis break. CCJ at $116.61 is approaching the $112 watchlist entry; URNM at $67.09 is in the accumulation zone. The AI data centre power demand + Section 232 national security framing + SMR deals (Amazon, Google) remain in force per Alden's thesis.

Weekly sentiment: 🔴 Bearish today — but structurally bullish; sector pullback may be creating entries in CCJ and URNM.

🔴 COMMODITIES — PRECIOUS METALS — 6 assets

Assets: GC, GLD, SI, SLV, GDX, GDXJ.

Analysts: Howell, Alden.

Today's biggest sector-level pullback in our universe: GDX **−6.19%**, GDXJ **−6.90%**, SLV **−5.07%**, GLD **−2.83%**. **This is the most important signal in today's report:** SLV has pulled from ~$72 to $68.49, exactly at the watchlist entry of $68. The structural debasement thesis (Howell/Alden/Pal convergence, PBOC buying at marginal price, gold/silver ratio compression) is unchanged — this appears to be Iran ceasefire-related risk-off and a dollar technical bounce, not a thesis break. The 30D returns remain positive (SLV **+11.33%**, GLD **+3.92%**).

Weekly sentiment: 🔴 Bearish today — significant intraday pullback but structurally bullish; SLV at $68.49 is an actionable entry level.

🔴 COMMODITIES — COPPER & INDUSTRIAL — 3 assets

Assets: HG, CPER, FCX.

Analysts: Spencer.

Copper pulling back today — FCX **−3.72%**, CPER **−1.22%**, HG **−0.32%** — but the 30D picture remains bullish (FCX **+30.00%**, HG **+12.62%**). FCX at $67.57 is 5.6% above the $64 watchlist entry — a further pullback would create a strong buy setup. China PBOC liquidity injection + AI grid infrastructure copper demand are the dual tailwinds. Today's dip is likely macro risk-off, not a copper demand signal.

Weekly sentiment: 🔴 Bearish today — pullback on macro risk-off; 30D trend intact; watching FCX for entry at $64.

🔴 DEFENSE & AEROSPACE — 7 assets

Assets: RTX, LMT, NOC, ITA, BA, SHLD, DRNZ.

Analysts: Spencer.

Defense is getting hit hard today: NOC **−6.98%**, RTX **−4.40%**, ITA **−3.78%**, LMT **−1.61%**. RTX at $187.17 is now the paper portfolio's weakest performer at **−4.02%** from entry $195, but the stop at $168 is intact. The NATO 2% GDP mandate and Raytheon missile demand thesis remain in force — this looks like sector-wide risk-off rather than thesis invalidation. DRNZ (drone ETF) **−0.84%** is the relative outperformer, validating the drone/autonomous warfare sub-theme. RTX 30D is **−5.55%** which is concerning — watch stop $168 closely.

Weekly sentiment: 🔴 Bearish — sector-wide selloff; RTX paper stop watch; thesis intact but under pressure.

🟢 ENERGY — 7 assets

Assets: XLE, XOM, CVX, SLB, UNG, CL, BE.

Analysts: Spencer, Hayes.

Energy is the ONLY green sector in today's scan — a direct read on the Hormuz ceasefire expiry. XLE **+1.45%**, CVX **+1.49%**, CL **+1.09%**, BE **+1.21%**. Oil at $90.59 with Kuwait force majeure active — if Hormuz access is disrupted, oil spikes rapidly. Hayes's energy-as-geopolitical-hedge thesis is playing out in real time today. BE (Bloom Energy) continues its monster 30D run at **+47.16%** — the AI data-centre clean power narrative is on fire. SLB **+1.09%** on 30D **+13.17%** confirms oilfield services demand.

Weekly sentiment: 🟢 Bullish — sole green sector; Hormuz risk + AI power demand = dual bid.

⚠️ DATA INFRASTRUCTURE — 3 assets

Assets: EQIX, DLR, IRM.

Analysts: Pal, Aschenbrenner.

Mild pullbacks across the board: EQIX **−0.87%**, DLR **−1.29%**, IRM **−2.24%**. But all three show strong 30D gains (EQIX **+14.09%**, DLR **+16.14%**, IRM **+18.29%**) — the data centre REIT bid from AI infrastructure capex is intact. These names benefit from the Anthropic-AWS $25B deal flagged in newsletters. Not a priority sector for near-term trades but confirms the broader AI infrastructure thesis.

Weekly sentiment: ⚠️ Mixed — minor daily pullback; monthly trend strongly bullish; hold existing exposure.

🔴 EMERGING MARKETS — 5 assets

Assets: INDA, FXI, EWZ, EWJ, EEM.

Analysts: Howell.

Broad EM risk-off today: EWJ **−2.45%**, INDA **−1.44%**, FXI **−1.46%**. EWZ (Brazil) **+16.34%** on 30D is the standout outlier. Howell's PBOC liquidity thesis creates a structural bid for China/EM assets but it's not showing up in today's action — global risk-off is trumping the macro liquidity tailwind for now.

Weekly sentiment: 🔴 Bearish today — Howell PBOC thesis intact structurally; near-term risk-off headwind.

⚠️ MACRO / RATES / INDICES — 7 assets

Assets: SPY, QQQ, AXJO, TLT, HYG, DJI, MGK.

Analysts: Alden, Howell, Bianco.

Broad indices down slightly: SPY **−0.65%**, QQQ **−0.38%**. TLT **−0.55%** — bonds not catching a safe-haven bid, which is unusual and worth watching (could reflect Warsh hawkish Fed risk). ASX flat **+0.07%**. *Data note: MGK is showing 1D −80.12% / 7D −79.47% / 30D −77.76% — this is a clear data error (likely a corporate action or stale quote). Treat MGK data as unreliable this run; excluded from analysis.*

Weekly sentiment: ⚠️ Mixed — slight daily pullback from ATH; Warsh testimony is today's key rate catalyst.

⚠️ FINTECH / PAYMENTS — 4 assets

Assets: PYPL, NU, AFRM, OPEN. (SQ unresolved this run.)

Analysts: Spencer.

Mixed signals: OPEN **+1.87%** and PYPL **−1.13%** while AFRM **−3.67%** pulls back from its monster 30D run of **+47.45%**. AFRM at $64.60 after +47% in 30 days is taking a natural breather — the BNPL / buy-now-pay-later thesis in a normalising rate environment remains strong. OPEN at $5.45 (**+20.84%** 7D) is breaking out — real estate tech platform showing unusual momentum worth monitoring.

Weekly sentiment: ⚠️ Mixed — AFRM pullback after strong run; OPEN breakout is the surprise.

🔴 AUSTRALIAN EQUITIES (ADR) — 2 assets

Assets: BHP, RIO.

Analysts: Spencer.

Both Australian mining majors down today: BHP **−2.39%**, RIO **−2.11%**. Despite strong 30D gains (BHP **+18.99%**, RIO **+17.52%**), today's iron ore and copper price weakness is pulling them lower. RIO's copper pivot (noted in AFR newsletter) is a medium-term bullish signal aligning with Spencer's copper thesis.

Weekly sentiment: 🔴 Bearish today — commodity price softness; 30D trend intact; structural buy on dips.

🔴 ROBOTICS / AUTOMATION — 2 assets

Assets: BOTT, TSLA.

Analysts: Spencer.

Both down today: BOTT **−2.14%**, TSLA **−1.55%**. TSLA 30D **+5.02%** — modest recovery but no momentum. The robotics/automation thesis is a long-term conviction play but lacks near-term catalysts.

Weekly sentiment: 🔴 Bearish today — low priority near-term; monitor for re-entry levels.

🟡 **CONSUMER TECH / GAMING — 1 asset**

Assets: TTWO.

Analysts: Spencer.

TTWO **+0.37%** — essentially flat. 30D **+8.48%** and 7D **+6.12%** show steady accumulation. GTA VI release cycle remains the long-term catalyst. Too early for a meaningful signal with one asset in the sector.

Weekly sentiment: 🟡 Neutral — steady but no urgent signal.

⍰ Watchlist — Waiting for Entry

Ticker	Entry	Current	Gap to Entry	Target	Stop	R:R	Conv
SLV	$68.00	$68.49	**+0.72% above** 🔥	$95	$58	2.7:1	73%
VRT	$285.00	$312.44	**+9.63% above**	$420	$240	3.0:1	76%
FCX	$64.00	$67.57	**+5.58% above**	$95	$53	2.82:1	72%
CCJ	$112.00	$116.61	**+4.12% above**	$165	$93	2.79:1	73%

- **SLV** — 🔥 AT ENTRY. Silver squeeze thesis: AI/solar/EV industrial demand + monetary debasement. Gold/silver ratio compression. Pull to $68 has arrived — monitor for trigger or scale in now.
- **VRT** — AI hyperscaler capex boom; #1 data centre power management globally. Backlog at record. Wait for $285 pullback.
- **FCX** — Largest publicly traded copper producer; AI grid + EV demand tailwind. Wait for $64 pullback (today's −3.72% is moving it closer).
- **CCJ** — Cameco; preferred Alden uranium vehicle. Today's sector selloff (−5.67%) is pushing toward $112 entry — watch closely.

📈 Almost Watchlist — Trending (55-69% Conv)

Ticker	Conv	Trend	Watch Level	What Needs to Change
AFRM	62%	➡ Neutral after run	$55-$58 pullback	*New — not yet in watchlist config.* Needs a 10-15% pullback from $64.60 to create a better R:R entry; BNPL normalisation thesis needs rate-cut confirmation.
BE	60%			*New — not yet in watchlist config.* Bloom Energy +47% in 30D is

Ticker	Conv	Trend	Watch Level	What Needs to Change
		▲ Approaching	$190-$200 pullback	extended; needs pullback to $190-$200 zone. AI data centre clean power demand is the catalyst — needs a contract announcement to move to 70%+.
OPEN	58%	▲ Approaching	$4.80-$5.00	*New — not yet in watchlist config.* +20.84% this week is unusual momentum for a small real estate tech name. Needs volume confirmation and understanding of what's driving the move. Speculative.

⚡ Triggered Watchlist — Paper P&L Tracking

Ticker	Entry	Triggered	Current	Paper P&L	Target	Stop	Status
NVDA	$185.00	2026-04-10	$199.88	**+8.04%**	$266	$157	📈 Running — da +75% YoY; Q1 I $78B; Vera Rub

💎 Long-Term Hold Accumulation Zones

Core Hold	Live Price	Accum. Zone	vs Zone	Price Signal	Valuation-Model Sig
BTC	$75,873	$65K – $72K	+5.4% above	🟡 NEAR ZONE — just above upper bound; watch for dip	🟢 **HIGH-CONVICTIC ACCUMULATE** — all aligned bullish: Bottor Value · Cowen 0.358 I Regime 0.15 Risk-On. crash flag.
ETH	$2,315	$1,800 – $2,200	+5.2% above	🟡 NEAR ZONE — just above upper bound; L2 risk watch	🟡 MIXED — Cowen 0. Risk ✅ but Regime 0. Neutral ⚠️ (ETH/BTC r vs 200DMA elevated, underperforming BTC models not fully align

Core Hold	Live Price	Accum. Zone	vs Zone	Price Signal	Valuation-Model Sig
GLD	$429.57	$390 – $420	+2.3% above	🟡 NEAR ZONE — within 5% of upper bound; PBOC bid pullback today	— (no model coverag
SLV	$68.49	$63 – $68	+0.7% above	🟢 IN ZONE — essentially at upper bound; watchlist entry triggered	— (no model coverag
URNM	$67.09	$58 – $68	−1.3% (in zone)	🟢 IN ZONE — at upper bound; today's sector selloff is adding pressure	— (no model coverag
GLXY	$24.95	$20 – $26	−4.0% (in zone)	🟢 IN ZONE — within accumulation range; today −6.90% creating entry	— (no model coverag

- **BTC** — NEAR ZONE + all 3 models aligned bullish (Bottom 24.3% · Cowen 0.358 Low · Regime 0.15 Risk-On): high-conviction accumulate on any dip toward $72K. Negative funding rates + Strategy $2.54B buy = near-term squeeze setup. If Warsh turns dovish today, BTC breaks higher.
- **ETH** — NEAR ZONE but Regime 0.287 Neutral (ETH/BTC underperformance flagged). Cowen 0.257 low-risk is bullish. Hold existing; don't add aggressively until ETH/BTC ratio recovers or Regime turns fully risk-on. Pal's 'Wall Street Moment' thesis intact medium-term.
- **GLD** — NEAR ZONE; today's −2.83% pullback is Hormuz/dollar-bounce noise, not reversal. Howell $10K/oz mid-2030s, PBOC buying at marginal price. Add on dips back to $410-$420.
- **SLV** — IN ZONE and AT watchlist entry $68. Silver squeeze thesis: AI/solar/EV supply deficit + monetary demand. 🔥 This is the highest-priority accumulation add today.
- **URNM** — IN ZONE; nuclear renaissance + SMR deal flow intact. Today's −4.72% dip is sector-wide, not thesis-specific. Good add zone.
- **GLXY** — IN ZONE; full-stack institutional crypto infrastructure directly benefits from BTC/ETH Wall Street adoption. Today's −6.90% creates a better entry. Pal/Nadeau-aligned thesis intact.

💼 Active Portfolio — Real Investments

No real-money positions yet. Review the Triggered Watchlist above — reply to Spencer to confirm any entries. NVDA (+8.04%), MU (+6.99%), and TSM (+0.84%) are all running profitably in paper. RTX and ASML are in drawdown but within stop levels.

🌟 New Universe Candidates + 📊 Open Investment Tracker

⚡ OKLO — NYSE / Nuclear SMR

Thesis: Oklo is the purest-play advanced nuclear SMR (small modular reactor) company in the US market, backed by Sam Altman, with government contracts and a direct pathway to powering AI data centres. Today's −8.10% selloff is the sharpest in the nuclear space — but it's a sector-wide drawdown, not an OKLO-specific catalyst. The SMR deal flow (Amazon, Google) and Section 232 national security framing remain intact per Aschenbrenner's thesis.

Source signal: Sector scan nuclear selloff + Aschenbrenner AI power demand thesis + sector watch context.

Initial conviction read: 62% — needs pullback to $52-$55 support zone from $62.61 for a better R:R entry. Current gap is too extended post-run. Watch for $55 as entry trigger.

Nick — approve OKLO for the scan universe?

⚡ BE — NYSE / Clean Energy & AI Power Infrastructure

Thesis: Bloom Energy is a clean hydrogen/solid-oxide fuel cell power company that has become an accidental AI infrastructure play — its modular, grid-independent power systems are ideal for data centres that need reliable power without waiting for utility grid upgrades. +47.16% in 30 days confirms the market is recognising this. The Anthropic-AWS $25B deal and ongoing hyperscaler capex create a sustained demand runway.

Source signal: Sector scan +47.16% 30D standout; newsletter Anthropic-AWS $25B deal; Aschenbrenner AI power thesis.

Initial conviction read: 60% — extended after 30D run; suggest entry trigger at $195-$200 on a pullback from current $220.91. Conviction upgrades to 70%+ if Bloom announces a hyperscaler power deal.

Nick — approve BE for the scan universe?

⚡ AFRM — NASDAQ / Fintech / BNPL

Thesis: Affirm is the leading US buy-now-pay-later platform, +47.45% in 30 days driven by consumer credit normalisation and Apple Pay integration expanding the addressable merchant base. In a rate-cutting environment (or even a Warsh dovish surprise today), BNPL platforms see direct margin expansion and credit quality improvement. The company is generating free cash flow for the first time. Risk: today's −3.67% after a massive run suggests a consolidation phase; better to wait for $55-$58 pullback.

Source signal: Sector scan 30D standout +47.45%; Morning Brew / Daily Upside coverage; Spencer's fintech coverage.

Initial conviction read: 62% — too extended at $64.60 post-run. Entry trigger: $55-$58 pullback (−10 to −15% from current). Would move to 72%+ at that entry with the same thesis intact.

Nick — approve AFRM for the scan universe?

⚡ RIO — ASX / NYSE / Mining / Copper Pivot

Thesis: Rio Tinto is executing a deliberate copper pivot — confirmed in today's AFR newsletter ("AI boom underpins Rio's copper pivot") — repositioning its portfolio from iron ore toward the metals most critical to AI infrastructure, EVs, and grid electrification. At $97.72 (30D **+17.52%**), it's a well-priced, dividending mining major with a board-level strategic alignment to the same copper supercycle thesis driving FCX on our watchlist. ASX-listed makes it directly accessible to Nick from Australia.

Source signal: AFR newsletter "AI boom underpins Rio's copper pivot"; sector scan 30D momentum; Spencer copper thesis already driving FCX on watchlist.

Initial conviction read: 65% — entry trigger at $90-$93 pullback from $97.72. Existing holding potential given ASX accessibility and dividend yield. Conv upgrades to 75%+ if copper ($6.02/lb today) breaks $6.50.

Nick — approve RIO for the scan universe?

📊 **Drive Tracker (running journal):** Easton Assets Investment Tracker — full history, strikethrough = closed, live-synced after every scan.

Reply to Spencer to confirm Active Portfolio entries, approve new universe candidates (OKLO, BE, AFRM, RIO), or adjust convictions. Priority action today: SLV at $68.49 is AT entry — confirm accumulation?
