Spencer's Overnight Report

- 💡 **What I improved:** Nothing material overnight — monitoring only.
- ⍰⍰**Building next:** Wire up Edge Bet scan to auto-settle picks once game dates pass — EB-025 and EB-026 are 4–5 days stale.
- 🔗 **Integration idea:** Pull Warsh confirmation hearing live updates into the Markets section via a webhook trigger — single biggest macro catalyst this week.
- 🚫 **Need your help:** Singapore trip spreadsheet is built but needs your sign-off before I send to Bridget — confirm you're happy with flights/accommodation before I hit send.

🔥 Today's #1 Priority

Warsh Fed Confirmation Hearing

This is today's single biggest macro pivot catalyst. If Warsh signals aggressive rate cuts, it's an instant liquidity tailwind for BTC, equities, and growth assets. If blocked or his testimony reveals dovish limits, expect a risk-off snap. **Watch the hearing live. Have a trade plan before it starts.**

Today's Priorities

#	Task	Why today
1	**Warsh confirmation hearing**	Biggest macro catalyst of the week — rate cut stance vs Fed independence
2	**Hormuz ceasefire expiry**	Expires today — Trump says no extension; Kuwait force majeure active; WTI at $90.42

#	Task	Why today
3	**Singapore trip — sign off & send spreadsheet to Bridget**	Research complete; waiting on your approval before sending
4	**Victoria business registration**	Cost breakdown + entity type question unresolved — clarify conveyancing question
5	**Tesla earnings + Mega-cap AI week**	Tesla reports today; Meta, Alphabet, Amazon this week — AI capex thesis signal
6	**Settle Edge Bet EB-025 / EB-026**	Both games played 4–5 days ago — pending status is stale

ETH @ $2,317.64

Model	Score	Band	Reading
② Cowen-Methodology Risk	**0.295**	🟢 Low Risk	ETH 40% below log-regression expected price ($3,888)
③ Stu's Risk Regime	**0.288**	🟡 Neutral	3/9 confidence. 1 of 5 elevated (ETH/BTC ratio).

- **② Cowen components:** Log regression 0.252 ×0.4=0.101 · 20WMA 0.118 ×0.2=0.024 · Realized vol 0.227 ×0.15=0.034 · Fear & Greed 0.33 ×0.15=0.050 · Social 0.875 ×0.1=0.088
- **③ Regime metrics:** Cycle position 0.037 · Sentiment 0.33 (F&G 33) · Leverage 0.25 (funding -0.0038%/8h) · Momentum 0.0 (RSI 27.2) · ETH/BTC ratio 0.824 ⚠️ elevated (ETH/BTC 0.940 vs 200DMA — this is the lone elevated signal)

Three lenses: Bottom Model for accumulation zones; Cowen-Methodology for long-term cycle position via log regression; Risk Regime for 2–8 week regime shifts. Convergence = high conviction. Divergence = read each model's dissent. All three BTC lenses green = risk-on confirmation.

🌍 Overnight Intelligence

News scan ran at 07:00 AEST. TL;DR: ***Warsh Fed confirmation fight risks policy shock; BTC exchange reserves at 7-yr lows signal coiled spring; data centre power crunch validates energy-as-AI-bottleneck thesis.***

🌍 Geopolitics

- **Hormuz ceasefire expires today.** Trump signals no extension likely. Kuwait force majeure active; WTI +0.9% overnight to $90.42. This is the single hardest binary for markets today — deal or no deal moves everything.
- **US seizes Iranian cargo vessel** over the weekend, unravelling Friday's partial opening. Iran reversed Hormuz plans. Talks in Pakistan shaky.
- **China dual-track:** Xi engaging KMT electorally (Taiwan incentives) while ISW-AEI assesses PRC likely aided Iranian targeting + air defense reconstitution. Semiconductor tail risk — latent, not imminent.
- **Balikatan exercises underway** (Apr 20–May 8) — 17k troops, 10k American, Philippines/Taiwan Strait adjacent. China elevated naval patrols. TSMC supply chain tail risk.
- **Trump-Xi summit delayed to May** — tariff/trade uncertainty remains elevated.

€ Markets

- **Warsh Fed confirmation hearing today** — rate-cut stance vs Fed independence is the single biggest macro pivot catalyst this week. JPM: no cuts in 2026; next move a hike Q3 2027.
- **Stagflation risk live.** Bloomberg: March CPI 3.4% YoY vs 2.4% in Feb. Gas up ~$0.60/gal post-conflict. Job openings 6.88M, hires rate 3.1% — lowest since early pandemic.
- **DXY ~98.3** on safe-haven bid — headwind for gold, BTC, commodities. Watch 98 as support.
- **S&P 500 Q1 earnings:** FactSet blended +13.2% YoY — sixth consecutive double-digit quarter. Guidance risk is the Q2 question. Tesla reports today; Meta, Alphabet, Amazon this week.

☄️ Crypto

- **BTC exchange reserves at 7-year lows.** Supply coiling. Negative funding rates signal heavy shorts into a rally — squeeze setup building.
- **Strategy bought another $2.54B.** BTC whale accumulation near 1-year highs. Institutional bid from ETFs holding the floor.
- **Michael Howell:** Global liquidity at $189.1T but momentum decelerating — BTC sitting on a critical trendline. Break or hold decides the next leg.
- **KelpDAO $293M exploit** (Lazarus Group suspected) wiped $13.2B DeFi TVL in 48hrs. AAVE -18%. Bridge infrastructure remains the ecosystem kill-zone — not a systemic risk to BTC.

🏭 Semis

- **TSMC record earnings beat confirmed.** MU +10.5% on the week. AI/HBM demand thesis intact across the stack.
- **Data centre power crunch playing out in real-time.** Energy-as-AI-bottleneck is now consensus — validates uranium/nuclear baseload thesis.
- **ASML:** China export controls + tariff noise dragging — paper -3.89%. Stop $1,280 intact; thesis unchanged long-term.

⛽ Commodities

- **Gold $4,732** — near ATH despite -1.55% daily dip. DXY recovery creating headwind but debasement bid structural.
- **Silver +6.15% 1W** (newsletter) — hard-asset bid accelerating. Dual industrial + monetary demand.
- **Oil WTI $90.42** — Hormuz expiry today is the next catalyst. Newsletter flagged $88+ and climbing.
- **Uranium (URNM) $67.09** — data centre power bottleneck narrative accelerating. Nuclear baseload thesis gaining urgency.

⛽ Watch List

- 🔴 **Hormuz decision TODAY** — extension or closure is the oil/inflation binary
- 🔴 **Warsh hearing TODAY** — rate cut signal = liquidity on; blocked = uncertainty premium back
- 🟡 **Tesla earnings today** + Meta/Alphabet/Amazon this week — AI capex guidance is the market-mover
- 🟡 **BTC $75K level** — third test this week; holding above exchange-reserve-fuelled coil
- 🟡 **DXY 98** — if it breaks down, hard assets and BTC re-accelerate

📅 Upcoming

- **Today (Wed 22 Apr):** Warsh Fed confirmation hearing · Hormuz ceasefire expiry · Tesla earnings · Investment Scanner 10:00am
- **Thu 23 Apr:** Bunnings + Glanfield St Run (6:00pm) · Meta earnings
- **Fri 24 Apr:** Morning Run, Royal Botanic Gardens (7:00am) · Alphabet earnings
- **This week:** Amazon earnings · Balikatan exercises ongoing (to May 8) · Trump-Xi summit watch (delayed to May)
- **No further calendar events logged beyond 24 Apr.**
